A Package of Subroutines for NLP and LCP

The tar file that you have received contains a package of Fortran 77 subroutines for solving Nonlinear Programming Problems and Linearly Constrained Problems in continuous optimization, together with descriptive matter and example programs.

THE ACCOMPANYING PROGRAMS ARE PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAMS CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THESE PROGRAMS ARE PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRMS OR THE EXERCISE OF ANY RIGHTS GRANTED WITHIN THE AGREEMENT, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

The user needs to choose whether to use a sparse matrix or dense matrix data structure. To solve an NLP using a sparse matrix data structure, the subroutines in the following files are required

filterSD.f, checkd.f, glcpd.f, l1sold.f, shared.f, schurQR.f, sparseA.f, util.f together with a user supplied driver program. The file schurQR.f implements a Schur complement scheme for sparse matrix updates. This replaces an a previous file sparseL.f implementing Fletcher-Matthews updates, which is also included in the distribution. These files are interchangeable.

To solve an NLP using a dense matrix data structure, the subroutines in the following files are required

filterSD.f, checkd.f, glcpd.f, l1sold.f, shared.f, denseL.f, denseA.f, util.f together with a user supplied driver program.

To solve an LCP using a sparse matrix data structure, the subroutines in the following files are required

glcpd.f, checkg.f, shared.f, schurQR.f, sparseA.f, util.f

together with a user supplied driver program.

To solve an LCP using a dense matrix data structure, the subroutines in the following files are required

glcpd.f, checkg.f, shared.f, denseL.f, denseA.f, util.f together with a user supplied driver program.

Information on how to set up the driver program is contained in the files filterSD.pdf and glcpd.pdf. Examples of driver programs are provided in the files hs106.f, hs106d.f, hs72.f and hs72d.f.

To solve a QP or LP, replace glcpd.f by qlcpd.f in the above. Usage of qlcpd.f is described at the head of the file and is similar to that for glcpd.f.

To facilitate access to CUTEr NLP test problems, a driver program driver.f and associated subroutines in the file user.f is provided.
